

Study File Collector Tool

What is Study File Collector Tool?

The **Study File Collector Tool** is a user-friendly desktop application designed to **automatically scan, identify, and organize files related to specific clinical studies or research projects.**

Root Cause

As a programmer we are often involved in multiple Projects, we tend to download various project-related files and typically store them in the Downloads folder. Over time, this leads to clutter and makes it difficult to locate specific files or backtrack information related to a particular project.

Uses

- 🔍 File Identification by Project ID/ Name.
- 📁 Organized File Collection
- 📁 Move or Copy Files
- 🚫 Sub Folder Exclusion
- ☐ Dry Run Mode
- 📊 Scan Summary

Demo

- Save the study_file_collector_gui zip file in the desktop and extract the files in your preferred folder.
- Double click, on exe file the application will open.
- In Study/Project give you required study, project ID, name if you want to check for all then you can mention them also.
- In Source directory mention the path where all the mentioned study/project files are present.
- In Destination directory mention the path where you want the final folder to be created.
- Under options select the preferred options you want to apply.
- Once done the folder will be created in the Destination directory.
- If any mistake happens in between selecting kindly click on Reset option.
